

PowerHealth Solutions = Knowledge

Knowledge of what you are getting for your money

Proud sponsor of PCSI-Conference Montreal 2011

Control costs, improve performance

PowerHealth Solutions' suite of products is dedicated to helping healthcare organisations control costs and improve clinical performance.

PowerPerformance Management

Our flagship system, PowerPerformance Management (PPM), enables healthcare services around the world to use Casemix to better understand and manage their businesses.

Identify cost savings

PPM calculates cost and revenue at the patient level, which permits the control of costs by identifying opportunities for cost saving and improving clinical resource efficiency.

Service Line & Quality Reporting

Importantly, PPM is multi-dimensional and is also used by our clients for Service Line Reporting, for calculating month-end revenue and to improve the quality of care and patient safety by identifying and quantifying the cost of adverse events.

Working with Health Services

In addition to working with individual hospitals, PowerHealth Solutions has built an established record of successfully working with health services to help them achieve their goals.

Australia's most populous state New South Wales implements PPM for state-wide costing and Casemix reporting across 220 public hospitals.

Republic of Ireland's Health Service Executive uses PowerHealth Solutions to deliver patient level costing studies for up to 15 hospitals.

Australian Capital Territory nominates PPM as the preferred patient costing solution for their public hospitals.

PowerHealth Solutions (PHS)

- ◆ PowerHealth Solutions has been a leading and innovative player in patient costing since 1995.
- ◆ With a wealth of experience and leading edge technology, PHS has consistently demonstrated its ability to successfully implement Patient Level Information and Costing Systems in any setting.
- ◆ PHS has an international focus, with customers in Australia and New Zealand, the United States, England, Ireland, Hong Kong and the Middle East.

What do you get for YOUR money?

“The Health Services Executive selected PowerHealth Solutions because it has the knowledge, expertise and systems needed to drive a more efficient Irish hospital system.”

Mr Brian Fitzgerald
Director of Finance
St James's Hospital, Dublin

Casemix international standard

Casemix-based funding is the emerging international standard for hospital payment, with 70% adoption by OECD countries.¹

More effective

Casemix enables health services to measure and compare activity and costs between hospital providers more effectively than historical-based funding mechanisms or fee-for-service private hospital funding models.

Encourage efficiency

Casemix encourages more efficient acute hospital treatment and recognises the costs associated with care of different diagnostic groups.

Resources based on benchmarks

Casemix distributes financial resources based on benchmarks rather than, for instance, fixed percentage changes in allocations.

Compare costs at patient level

To ensure that the benefits of a casemix-based funding system are more completely realised, funding should be compared to costs at the patient level to enable more informed decision-making to be undertaken.

¹ **You Get What You Pay For*** A Global Look at Balancing Demand, Quality, and Efficiency in Healthcare Payment Reform, PricewaterhouseCoopers' Health Research Institute, June 2008

PowerPerformance Management supports Casemix funding, by calculating both costs and revenue at the patient level — significantly increasing the value of the information to the organisation.

- ◆ More robust and quantified decision-making
- ◆ Greater cost control
- ◆ Increased capital efficiency
- ◆ Better quality of services due to better focus
- ◆ Quicker response to competitive forces
- ◆ Better analysis of alliance options.

Casemix Costing and Decision Support

- Costing** — Identify cost savings and improve resource efficiency
- Revenue** — Analyse contract performance, manage terms & revenues
- ICD Coding** — Eliminate funding losses through inaccurate coding
- Budgeting** — Save time during budget creation and management.

Reporting

- An out-of-the-box solution for the health industry, with an extensive library of health content reports that can be easily extended to fit your organisation's needs.
- Digital Dashboard** — Real-time monitoring of business performance
- Executive Reporting** — Automated e-mailed reports
- OLAP Reporting** — Analyse vast volumes of hospital data.

Patient Billing

- Enterprise-wide** — Connects easily with existing operational systems to gather service data to support real-time billing and present a single consolidated invoice.
- Billing rules and workflows** — Flexibility to manage changes to billing policies and processes without software upgrades.
- Functionally rich** — Debtor management, payment receipting, revenue reporting.
