

PowerHealth assists Middle East healthcare reform

5th September 2007

PowerHealth Solutions' recent work in the Middle East is assisting healthcare transformation in that region as governments consider healthcare reform.

Healthcare systems in the Middle East are facing major challenges as public health services are strained by factors such as dramatic population increases, new diseases associated with changing lifestyles and social developments.

In view of the rising costs of health services and to relieve the federal budget, the United Arab Emirates ministry of health has been looking into alternative methods of healthcare financing, including the introduction of private healthcare insurance.

As an international leader of healthcare costing software and services, PowerHealth Solutions was engaged to perform the costing study required to assist the ministry in setting health insurance pricing.

The project was very successful — exceeding the client's expectations for the project as well as being on time and on budget.

The United Arab Emirates project manager was extremely impressed with the professionalism and efficiency with which the costing study was completed, to achieve a remarkably thorough result — “I am very amazed about this assignment which covers all the information and data within 4 months. It's impressive work you've done.”

PowerHealth Solutions Director Patrick Power said, ‘we are very excited to be assisting in the Middle East. Contributing at a national level allows us to have a greater impact which will lead to a better provision of healthcare for citizens in a very real way’.
