PowerPerformance Manager

Costing & Revenue

20 YEARS 1995 - 2015
Driving Healthcare Efficiency

PowerPerformance Manager (PPM) is a web-based system that calculates service delivery costs and funding revenue, based on clinical and financial data consolidated from other healthcare systems.

PPM meets all requirements for the following patient funding schemes:

- Activity Based Funding (Australia, Ireland[1])
- Payment by Results (UK)

1 Formerly: Money Follows the Patient - Ireland

> "PPM is a sensational product that gives us detailed and accurate costing information. There is nothing you can ask us about our hospital that we cannot know the cost of."

Ms Sharon Kendall
Director of Business Operations
St Andrews Hospital, Adelaide

> "PPM is easy to use, and as Monash Health has included more patient data than before due to the ABF requirements, the quick processing times means that we can turnaround much faster and deliver reports in a meaningful timeframe."

Ms Tracy Hewitt
Costing Analyst
**Monash Health, Melbourne**

The Edge in Activity Based Funding

Traditionally, little emphasis has been given to the profitability of delivering healthcare. With the alarming rise in healthcare costs, survival of an organisation is now balanced on the ability to understand and manage expenditure and revenue, whilst providing quality patient care.

It is crucial for hospitals to understand profitable vs non-profitable services, health units, sites and clinicians by processing more frequently than just once a year.

PPM is the essential tool for efficient healthcare management, providing an intuitive and easy-to use system that supports task-oriented processing.

PPM's familiar Windows interface features intuitive functionality. The process map provides an instant view of processing progress together with status indicators.

The dashboard displays a task queue for monitoring individual tasks, with drilldown capability.

- Intuitive Windows interface with visual controls
- Configuration setup simplifies processing, allowing more time for valuable data analysis
- Process map interface provides an instant view of processing progress with status indicators
- Task dashboard enables monitoring of individual tasks and ability to drilldown to processing details
- Scheduler automates processing at preset times and frequencies
- Comprehensive library of standard reports provides parameters for targeted reporting

Costing

PPM calculates the true cost of care delivery to accurately measure business performance, and identify areas for cost savings or improvements:

- Costs all forms of activity to any degree
- Creates patient level activity data for areas without a source system
- Controls overhead allocations and prepares your General Ledger
- Calculates the cost of delivery for each patient encounter and measures gains and losses against benchmark prices.

Reporting

PPM provides a consolidated enterprise data warehouse for all your clinical, patient administration and financial data:

- Generates and distributes scheduled reports automatically
- Delivers consistent and accurate results for a single version of the truth
- Secures your data for peace of mind
- Allows access to live reports from anywhere in the world
- Provides a variety of export formats to easily open reports in other applications.
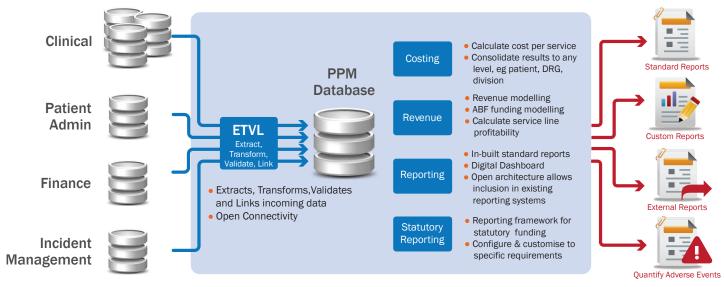

Reporting Framework

PPM delivers a customised reporting framework to process all hospital data through the same validating, mapping or processing steps into submission-ready files:

- Standardises State and National Health Authority statutory reporting across all participating hospitals
- Automates manual processing to save time and reduce errors
- Enables submission of high quality, consistent reports in specified file formats (CSV or XML).

Funding and Revenue

PPM models revenue from Government funding and private health funds to reduce the turnaround time for applications to update business funding rules:

- Compares revenue to cost by calculating service line profitability
- Manages your business rules, allowing changes to be incorprated easily
- Replicates business rules for complex terms and conditons using the intuitive drag-and-drop interface.
